Summary

- Software Analysis and Development Technologist focused on building efficient and scalable solutions. Experienced in requirements gathering, data and process modeling, software design, development, and testing. Proficient with databases, APIs, and technical documentation, ensuring quality in every delivery. Strong team player with a results-driven approach.

Education

SENA, Technologist in Software Analysis and Development Nov 2023 – Feb 2026

Ministry of ICT - Universidad Sergio Arboleda, Technical in Programming Fundamentals with Python Dec 2022 – Dec 2022

Ministry of ICT - Universidad Sergio Arboleda, Technical in Software Development with Java Programming Language Nov 2022 – Nov 2022

Ministry of ICT - Universidad Sergio Arboleda, Technical in Basic Programming with Java Programming Language Sept 2022 – Sept 2022

Ministry of ICT - Universidad Sergio Arboleda, Technical in Programming Fundamentals with Python Aug 2022 – Aug 2022

SENA, Technical Course in Mobile Device Programming Nov 2019 – Nov 2019

Projects

Eira

Mental health platform with hexagonal architecture and AI integration for automated assistance.

- Hexagonal architecture with DDD patterns and Prisma ORM for data management.
- Integration with Gemini and Groq (automatic failover) for AI functionalities.
- OWASP Top 10 security and authentication best practices implementation.
- CI/CD pipeline with Vitest for unit tests and Playwright for E2E testing.
- [Repository](#)
- [Demo](#)

Danu

SaaS project management application with Kanban boards, Gantt charts, and real-time collaboration.

- Kanban and Gantt boards with synchronized views and automated PDF reports.
- Real-time communication via Supabase WebSockets and layered architecture.
- Next.js 16 with strict TypeScript and 92 passing tests.
- Robust validation with Zod and offline-first synchronization.
- [Repository](#)
- [Demo](#)

InvYGO

SPA for inventory management and dynamic sets construction with business rule validation, real-time synchronization, and scalable architecture.

- React 19 with TanStack Query for intelligent query caching and Zustand for global state management.
- Business rule validation architecture across frontend and backend for data consistency.
- Internationalization (i18n) system ready for multiple languages with i18next.
- Performance optimization with lazy loading, memoization, and efficient async state handling.
- [Repository](#)
- [Demo](#)

Impostor

Real-time multiplayer game with monorepo architecture and bidirectional client-server communication.

- pnpm workspaces monorepo with NestJS backend and Socket.IO for real-time communication.
- React 19 + Vite frontend with Tailwind CSS and MongoDB persistence.
- Room system with predictable lifecycle and shared contracts (DTOs).
- [Repository](#)
- [Demo](#)

Skills

- Frontend Development: React, TypeScript, Next.js, Tailwind CSS, Vite, Design Handoff, UI Testing
- Backend Services: Node.js, Express, REST APIs, NestJS, Socket.io, API Validation
- Data Administration: PostgreSQL, MySQL, Prisma, MongoDB, Supabase, Query Optimization
- Delivery Pipeline: GitHub, GitHub Actions, Docker, Vercel/Netlify, Testing Discipline, Basic Monitoring
